CHICAGO – Gold Eagle® Co.'s STA-BIL®, America's #1 selling fuel stabilizer, just got even better. It now contains added corrosion protection, making it more relevant for use in today's fuels containing ethanol.

Ethanol in gasoline attracts water from the air, which can cause corrosion damage to fuel tanks, fuel lines, carburetors and injectors. It also acts as a solvent on accumulated deposits that have formed in the fuel tank, which can cause engine performance problems. The improved STA-BIL formula was designed to further protect the fuel system from this corrosion caused by ethanol, in addition to the product's main attribute of preventing oxidation (break down) of fuel during storage. STA-BIL also contains a water remover and injector cleaner to keep carburetors and fuel injectors clean.

The improved STA-BIL fuel stabilizer is now recommended to be used AT EVERY FILL UP for year-round protection against corrosion, and is an ideal choice for those using ethanol-based fuels, and anyone using their vehicles or equipment infrequently.

STA-BIL ensures quick, easy starts in all two and four-cycle engines, and can be used in all blends of gasoline. It is safe to use in all cars, trucks, SUV's, marine equipment, tractors, motor homes, motorcycles, ATV's, snowmobiles, and small gasoline powered equipment such as lawnmowers and snow blowers. Gas cans should also be treated with STA-BIL at every fill up.
